

Eternal Token

XET

White Paper Ver.1.2

Atom Solutions, Co., Ltd.

Jul. 4th, 2018

XET (Eternal Token)

Before introducing XET, we first need to explain Eternal Coin (XEC) issued by Atom Solutions. Eternal coin (XEC), the virtual currency issued by Atom Solutions, Japan. Please visit to the homepage for more details.

Eternal Coin White Paper

<https://www.atom-solutions.jp/whitepaper/whitepaperver.2.0en.pdf>

XEC is featured where only tradable at authorized exchanges.

Tradable only at authorized exchanges has the following advantages.

- Various fiat currencies of different countries are included in one wallet due to its worldwide common wallet feature. (Multi Currency Wallet)
- Traceable even if the system being hacked.
- XEC value can be divided into a smaller fraction.
- Weekly Dividend Distribution of the 50% total transaction fees.
- Payable via fi at currency
- Transfer via phone number

However, there is disadvantage for user who desire to purchase XEC in the countries without authorized exchange available.

Therefore, we have invented XET to be a mechanism for acquiring XEC indirectly in countries without XEC exchanges.

Features of XET

■ Bidirectional Trade of XET and XEC

There are 200 million issued units of XET which is the same amount of volume of the XEC. To trade with XEC, the XEC holder must first create an Eternal Wallet through authorized XEC exchanges.

Likewise, XEC holder can exchange their XEC into XET at 10 (XEC) :1(XET) ratio and vice versa.

■ Problems of Virtual Currency

The problem of general virtual currency is considered to be the following points.

- Wrongly transmitted transactions cannot be reverted or cancelled.
- Once a virtual currency exists on the public block chain, its cannot be changed its specification once it started.
- There is no party to responsible for compensation if user's wallet has encountered cyber hacking.
- There are risks in bankruptcy and hacking issues of exchanges.
- Tracking back is difficult when encountered cyber hacking.

■ Advantage of Issuing XET and XEC

XEC is a virtual currency which provides various conveniences and dividends through Eternal Wallet. However, there is barricade in acquiring XEC for user who is living in countries without XEC authorized exchanges available. Therefore, one of the features of XET is convenient for the users in those countries in purchasing XEC indirectly. Also, another merit of XET is, it can be exchanged to other virtual currencies by being traded at various virtual currencies exchanges all over the world.

As for countries without XEC exchanges available, it is not possible to get XEC even if you open a wallet, Furthermore, overseas remittance and merchant payment cannot be performed will cause no advantage in holding XEC.

(Note: Fiat currency of the country without XEC authorized exchanged available is not tradable.)

As one of the features of XEC where users can receive dividends via Eternal Wallet, the disadvantage is XEC cannot be exchanged with other virtual currencies.

However, we found a solution. By exchanging XEC and XET and vice versa the demerit has been solved.

In addition, since we have corresponding solutions for hacking and wrong

transmission

issues, for XEC users who do not have necessity in exchange their XEC to XET, keeping the mentioned XEC can benefits them in earning extra dividends.

The method of issuing virtual currencies compatible with XEC and XET is a form of a new virtual currency that solves the disadvantage of general virtual currencies and the disadvantage of the eternal coin and its features.

■ About XEC and XET Trading

The exchange between XEC and XET will be implemented via Token Hub, Philippines.

Token Hub will issue and hold 200 million units of XET which can be exchanged with Eternal Coin at 1 (XET) :10 (XEC) ratio and operates the exchange.

Initially, there will be no XET holder until there is a user who wants to convert XET with XEC and that is the time where XET started to circulate to the crypto currency market exchange.

Example:

If there are users who exchange 1000 XEC for 100 XET, the XET traded on the market will be 100 XET and the XEC stored in Token Hub Exchange will be 1000 XEC until the amount will be exchanged next time. Therefore, there will be no issue such as the exchange is running out of XEC or XET.

In addition, the number of XEC and XET that circulated out to the market will never exceed issued units based on the mechanism above.

■ The History of Monetary System and the Future of XEC

The history of money starts with barter, then replaced by shells and stones, metal made money, convertible banknotes (banknotes that exchangeable for gold), and finally paper money issued and the credit is supported by central bank until the present.

If the development of virtual currency is same with history of monetary, it is predictably that XEC will need to be supported by credit in coming future.

As similar as the value of the paper money supported by central bank and government, XET value can be said that is supported by XEC.

We strive to achieve our goals in making Eternal Wallet the most useful wallet in the world via different activities in order to increase the value of XEC.

■ Notes

- XET cannot be stored in Eternal Wallet, it requires an external wallet such as “My Ether Wallet” to store the coin.
- DoT (Dividends Distribution Function), as one of the features of XEC is a function of Eternal Wallet. Holding of XET is not applicable to the dividend distribution.
- XEC value division function will be implemented when its value increased to a certain amount. During the time, XET is not applicable to the function.
- Also, when the value division function is implemented, the exchange ratio between XEC and XET will be different, but rest assured there will be no affect to XEC & XET holders
- XEC user is guaranteed and protected from cyber hacking, system bug and larceny incidents by its authorized exchanges structure and Eternal Wallet mechanism. However, XET which can be traded over the world is not subject to the mentioned guarantee and protection.
- Since XET is tradable at global exchanges, there are possibilities where it will be affected by certain issues such as bankruptcy of the exchanges and cyber hacking. Therefore, it is recommended to store the XET in the cold wallet.

Compensation of XET is not applicable at Atom Solutions, XEC authorized exchanges in various countries and Token Hub.

XET Overview

Name of the Coin: ETERNAL TOKEN Ticker (Symbol): XET

Proof Type: Proof of Work

Algorithm: Ethash

Total Supply: 200,000,000 pieces

Average Blocktime: 15 to 17 seconds

Exchange URL: IDAX | <https://www.idax.pro/>
H&B | <https://www.hnb-ex.com/>
OEX | <https://www.oex.com/index>
